ANALYTIC SUBJECT INDEX

Adhesion forces
– Liquid structure and short-range forces between surfaces in liquids - Israelachvili and Christenson **140A** (1986) 278
Aerosols
– Aggregation phenomena and fractal structures - Kolb **140A** (1986) 416
Aggregation phenomena
– —and fractal structures - Kolb **140A** (1986) 416
Aharonov–Bohm effect
– The—in normal metals–non-ensemble averaged quantum transport - Webb et al. **140A** (1986) 175
Alexander–Orbach conjecture
– Special purpose computers in statistical physics - Herrmann **140A** (1986) 421
AlMn
– Origins of quasicrystal ordering - Henley **140A** (1986) 306
Alumina polymers
– Equilibrium structure and rigidity of— - Schaefer et al. **140A** (1986) 105
Amorphous matrix
– Crystallization of amorphous metal–insulator mixtures - Deutscher and Lareah **140A** (1986) 191
Amphiphile(s)
– Hamiltonian and phenomenological models of microemulsions - Widom et al. **140A** (1986) 26
– Experimental studies of the dynamics of fluid phase transitions in two dimensions - Knobler **140A** (1986) 198
Anderson localization
– Localization of light: the quest for the white hole - Lagendijk et al. **140A** (1986) 183
Anisotropy
– Diffusion limited aggregation and its response to— - Ball **140A** (1986) 62
Ant in a labyrinth
– Systematic density expansion of transport properties of random lattices - Ernst **140A** (1986) 390
Atom-triplet potentials
– Kinetics in chemically reactive liquids - Stillinger **140A** (1986) 142
Automata
– Lattice gas—for fluid mechanics - D'Humières and Lallemand **140A** (1986) 326
Autonomous equations
– Microscopic origin of hydrodynamic equations: derivation and consequences - Lebowitz **140A** (1986) 232

Bifurcation
– Transition of growth from dendrite to aggregate - Sawada **140A** (1986) 134
Bilayers
– Exotism around the smectic A state in associated liquid crystals - Hardouin **140A** (1986) 359
Binary fluid mixture
– Towards a scaling theory of drag reduction - de Gennes **140A** (1986) 9

Biogenesis
– A critical phenomenon approach of— - Tsallis and Ferreira **140A** (1986) 336
Biopolymers
– A critical phenomenon approach of biogenesis - Tsallis and Ferreira **140A** (1986) 336
Bond moving (see *Potts model, q-state*) **140A** (1987) 629
Boson mapping (see *Exciton systems, dense*) **140A** (1987) 612
Breath figures
– Experimental studies of the dynamics of fluid phase transitions in two dimensions - Knobler **140A** (1986) 198
Brownian motion
– From dynamical systems to statistical mechanics and back - Ruelle and Sinai **140A** (1986) 1

Capillary condensation
– Liquid structure and short-range forces between surfaces in liquids - Israelachvili and Christenson **140A** (1986) 278
Capillary waves
– Synchrotron X-ray studies of liquid–vapor interfaces - Als-Nielsen **140A** (1986) 376
Cell model (see *Domain growth*) **140A** (1987) 478
Cellular automata
– Special purpose computers in statistical physics - Herrmann **140A** (1986) 421
Chaos
– From dynamical systems to statistical mechanics and back - Ruelle and Sinai **140A** (1986) 1
– Symbolic dynamics and systematics of periodic windows - Hao **140A** (1986) 85
– Levy walks with applications to turbulence and— - Shlesinger et al. **140A** (1986) 212
Chemical bond
– Kinetics in chemically reactive liquids - Stillinger **140A** (1986) 142
Chemical reactivity
– Kinetics in chemically reactive liquids - Stillinger **140A** (1986) 142
Clustering of clusters
– Aggregation phenomena and fractal structures - Kolb **140A** (1986) 416
Clusters
– Formation of quasicrystals - Bendersky and Schaefer **140A** (1986) 298
Coalescence
– Experimental studies of the dynamics of fluid phase transitions in two dimensions - Knobler **140A** (1986) 198
Coherent quantum system
– The Aharonov–Bohm effect in normal metals–non-ensemble averaged quantum transport - Webb et al. **140A** (1986) 175
Colloid science
– Aggregation phenomena and fractal structures - Kolb **140A** (1986) 416
Complexity
– How to measure self-generated— - Grassberger **140A** (1986) 319
Computational complexity
– How to measure self-generated complexity - Grassberger **140A** (1986) 319
Computer science
– What statistical mechanics has to say to computer scientists - Anderson **140A** (1986) 405
Conductance fluctuations
– Universal—in disordered metals - Lee **140A** (1986) 169
Conduction electrons
– Critical dynamics of a localized moment system coupled to— - Becker **140A** (1987) 521
Conduction electrons (see *Resonator, metallic*) **140A** (1987) 637

Conductivity
– Special purpose computers in statistical physics - Herrmann **140A** (1986) 421
Conformal group
– Conformal invariance and critical behavior - Cardy **140A** (1986) 219
Conformal invariance
– —and critical behavior - Cardy **140A** (1986) 219
Connectivity fluctuations
– Some open questions in the elasticity of polymer networks - Bastide and Boue **140A** (1986) 251
Coulomb gas
– The two-dimensional—: a fixed ion model and the dynamic characterization of the dielectric–plasma transition - Hansen **140A** (1986) 150
Coulomb interactions
– Quantum statistics of Coulomb systems: thermodynamic functions and phase transitions - Ebeling et al. **140A** (1986) 160
Critical binary mixtures
– Shear flow problems in— - Onuki **140A** (1986) 204
Critical dynamics (see *Localized spins*) **140A** (1987) 521
Critical dynamics (see *Potts model, q-state*) **140A** (1987) 629
Critical exponents
– Some rigorous results for random and quasi-periodic potentials - Spencer **140A** (1986) 70
– Rigorous studies of critical behavior - Aizenman **140A** (1986) 225
Critical exponents (see *XY model with cubic anisotropy*) **140A** (1987) 585
Critical kinetics
– Kinetics of phase transition in polymer gels - Tanaka **140A** (1986) 261
Critical phenomena
– A critical phenomenon approach of biogenesis - Tsallis and Ferreira **140A** (1986) 336
Critical slowing-down
– Kinetics of phase transition in polymer gels - Tanaka **140A** (1986) 261
Crystal field
– Spin slips and lattice modulations in holmium: a magnetic X-ray scattering study - Bohr et al. **140A** (1986) 349
Crystalization
– A model for crystallization: a variation on the Hubbard model - Lieb **140A** (1986) 240
Curvature
– Effective rigidity of membranes - Peliti **140A** (1986) 269
Curvature energy
– Effective rigidity of membranes - Peliti **140A** (1986) 269

Darcy's Law
– Recent developments in the theory of pattern formation - Langer **140A** (1986) 44
Decagonal
– Formation of quasicrystals - Bendersky and Schaefer **140A** (1986) 298
Delocalization transition
– The two-dimensional Coulomb gas: a fixed ion model and the dynamic characterization of the dielectric–plasma transition - Hansen **140A** (1986) 150
Dendrite
– Transition of growth from—to aggregate - Sawada **140A** (1986) 134
Dendritic solidification
– Recent developments in the theory of pattern formation - Langer **140A** (1986) 44
Dielectric breakdown model
– Multifractal structure of clusters and growing aggregates - Coniglio **140A** (1986) 51

Dielectric-plasma transition
– The two-dimensional Coulomb gas: a fixed ion model and the dynamic characterization of the dielectric–plasma transition - Hansen **140A** (1986) 150
Diffusion coefficient (see *Polymer chain*) **140A** (1987) 506
Diffusion equation
– Recent developments in the theory of pattern formation - Langer **140A** (1986) 44
Diffusion limited aggregation
– Multifractal structure of clusters and growing aggregates - Coniglio **140A** (1986) 51
– —and its response to anisotropy - Ball **140A** (1986) 62
– Pattern growth and fluid displacements through porous media - Lenormand **140A** (1986) 114
– Fractal viscous fingering: experiments and models - Nittmann **140A** (1986) 124
Diffusion limited morphology
– Crystallization of amorphous metal–insulator mixtures - Deutscher and Lareah **140A** (1986) 191
Diluted Ising antiferromagnet
– Phase transitions and metastable states in the presence of random fields - Cowley et al. **140A** (1986) 285
Dimensional reduction
– On the Ising model in a random magnetic field - Imbrie **140A** (1986) 291
Dimers
– Molecular tail lengths, dipole pairings, and multiple reentrance mechanisms of liquid crystals - Indekeu and Berker **140A** (1986) 368
Dipoles
– Molecular tail lengths, dipole pairings, and multiple reentrance mechanisms of liquid crystals - Indekeu and Berker **140A** (1986) 368
Directed animal
– Some exact results for polymer models - Dhar **140A** (1986) 210
Distribution function (see *Fermi gas, relativistic*) **140A** (1987) 567
Divalency
– Kinetics in chemically reactive liquids - Stillinger **140A** (1986) 142
DLA
– Fractal viscous fingering: experiments and models - Nittmann **140A** (1986) 124
Domain growth
– —in systems with multiple-degenerate ground states - Ohta et al. **140A** (1987) 478
Domain size distribution
– Decay of metastable and unstable states: mechanisms, concepts and open problems - Binder **140A** (1986) 35
Double-layer forces
– Liquid structure and short-range forces between surfaces in liquids - Israelachvili and Christenson **140A** (1986) 278
Drag reduction
– Towards a scaling theory of— - de Gennes **140A** (1986) 9
Droplet(s)
– Decay of metastable and unstable states: mechanisms, concepts and open problems - Binder **140A** (1986) 35
– Experimental studies of the dynamics of fluid phase transitions in two dimensions - Knobler **140A** (1986) 198
– Shear flow problems in critical binary mixtures - Onuki **140A** (1986) 204
Dynamic susceptibilities, second order (see *Projection operator formulation*) **140A** (1987) 597
Dynamical exponents (see *Potts model, q-state*) **140A** (1987) 629

Eddies
– Towards a scaling theory of drag reduction - de Gennes **140A** (1986) 9
Elasticity
– Some open questions in the—of polymer networks - Bastide and Boue **140A** (1986) 251
Electro-chemical decomposition system
– Transition of growth from dendrite to aggregate - Sawada **140A** (1986) 134
Energy–momentum tensor (see *Fermi gas, relativistic*) **140A** (1987) 567
Entanglements
– Some open questions in the elasticity of polymer networks - Bastide and Boue **140A** (1986) 251
Entropic forces
– Liquid structure and short-range forces between surfaces in liquids - Israelachvili and Christenson **140A** (1986) 278
Erbium
– Spin slips and lattice modulations in holmium: a magnetic X-ray scattering study - Bohr et al. **140A** (1986) 349
Ergodic hypothesis
– From dynamical systems to statistical mechanics and back - Ruelle and Sinai **140A** (1986) 1
Erratum
– Pearson-walk visualization of the one-dimensional chaos - Nagai et al. **140A** (1987) 647
Exact results
– Some—for polymer models - Dhar **140A** (1986) 210
Exciton systems, dense
– On the theory of dense exciton systems - Ivanov et al. **140A** (1987) 612

Farey sequences
– Symbolic dynamics and systematics of periodic windows - Hao **140A** (1986) 85
Fermi gas, relativistic
– The relativistic Fermi gas in a nonuniform velocity field - Heinz et al. **140A** (1987) 567
Fermion–boson–spin systems
– Thermodynamical and Green function many-body Wick theorems - Westwanski **140A** (1987) 433
Fermionic electrons
– A model for crystallization: a variation on the Hubbard model - Lieb **140A** (1986) 240
Ferromagnetic–spin-glass transition (see *Spin glasses*) **140A** (1987) 450
Feynman path
– Universal conductance fluctuations in disordered metals - Lee **140A** (1986) 169
Field theory
– Rigorous studies of critical behavior - Aizenman **140A** (1986) 225
Film on aggregation
– Aggregation phenomena and fractal structures - Kolb **140A** (1986) 416
Fingering
– Diffusion limited aggregation and its response to anisotropy - Ball **140A** (1986) 62
Fingering instability
– Recent developments in the theory of pattern formation - Langer **140A** (1986) 44
First order phase transition
– Rigorous renormalization group at work - Gawędzki **140A** (1986) 78
First principles
– Rigorous studies of critical behavior - Aizenman **140A** (1986) 225
Fluid mechanics
– Lattice gas automata for— - D'Humières and Lallemand **140A** (1986) 326
Fluid phase transitions
– Experimental studies of the dynamics of—in two dimensions - Knobler **140A** (1986) 198

Fluorescence microscopy
– Experimental studies of the dynamics of fluid phase transitions in two dimensions - Knobler **140A** (1986) 198
Fokker–Planck equation (see *Localized spins*) **140A** (1987) 521
Fractal growth
– Fractal viscous fingering: experiments and models - Nittmann **140A** (1986) 124
Fractal(s)
– Multifractal structure of clusters and growing aggregates - Coniglio **140A** (1986) 51
– Diffusion limited aggregation and its response to anisotropy - Ball **140A** (1986) 62
– Fractons - Alexander **140A** (1986) 397
– Aggregation phenomena and fractal structures - Kolb **140A** (1986) 416
Fracton
– —s - Alexander **140A** (1986) 397
Frustration
– Spin glasses theory - Parisi **140A** (1986) 312
– Exotism around the smectic A state in associated liquid crystals - Hardouin **140A** (1986) 359

Gaussian springs
– Some open questions in the elasticity of polymer networks - Bastide and Boue **140A** (1986) 251
Ginzburg criterion
– Decay of metastable and unstable states: mechanisms, concepts and open problems - Binder **140A** (1986) 35
Glauber dynamics
– Microscopic origin of hydrodynamic equations: derivation and consequences - Lebowitz **140A** (1986) 232
Glauber rate
– Microscopic origin of hydrodynamic equations: derivation and consequences - Lebowitz **140A** (1986) 232
Global minimum
– Spin glasses theory - Parisi **140A** (1986) 312
Granular structures
– Crystallization of amorphous metal–insulator mixtures - Deutscher and Lareah **140A** (1986) 191
Green's function (see *Wick theorems*) **140A** (1987) 433
Griffiths singularities
– On the Ising model in a random magnetic field - Imbrie **140A** (1986) 291
Ground states, multiple-degenerate
– Domain growth in systems with multiple-degenerate ground states - Ohta et al. **140A** (1987) 478
Growth
– Diffusion limited aggregation and its response to anisotropy - Ball **140A** (1986) 62
– Transition of—from dendrite to aggregate - Sawada **140A** (1986) 134
– Experimental studies of the dynamics of fluid phase transitions in two dimensions - Knobler **140A** (1986) 198
– Aggregation phenomena and fractal structures - Kolb **140A** (1986) 416
Growth phenomena
– Multifractal structure of clusters and growing aggregates - Coniglio **140A** (1986) 51
Gutzwiller–Hubbard–Kanamori model
– A model for crystallization: a variation on the Hubbard model - Lieb **140A** (1986) 240

Hard hexagon model
– Some exact results for polymer models - Dhar **140A** (1986) 210

Hard square lattice gas model
– Some exact results for polymer models - Dhar **140A** (1986) 210
Hele Shaw cell
– Fractal viscous fingering: experiments and models - Nittmann **140A** (1986) 124
Hierarchical memory model
– Hierarchical model of memory - Dotsenko **140A** (1986) 410
Holmium
– Spin slips and lattice modulations in—: a magnetic X-ray scattering study - Bohr et al. **140A** (1986) 349
Hubbard model
– A model for crystallization: a variation on the— - Lieb **140A** (1986) 240
Hydrodynamic equations
– Microscopic origin of—: derivation and consequences - Lebowitz **140A** (1986) 232

Icosahedral
– Formation of quasicrystals - Bendersky and Schaefer **140A** (1986) 298
Icosahedral order
– Origins of quasicrystal ordering - Henley **140A** (1986) 306
Immiscible displacements
– Pattern growth and fluid displacements through porous media - Lenormand **140A** (1986) 114
Impurity
– Universal conductance fluctuations in disordered metals - Lee **140A** (1986) 169
– The Aharonov–Bohm effect in normal metals–non-ensemble averaged quantum transport - Webb et al. **140A** (1986) 175
Imry–Ma argument
– On the Ising model in a random magnetic field - Imbrie **140A** (1986) 291
Incipient infinite cluster
– Multifractal structure of clusters and growing aggregates - Coniglio **140A** (1986) 51
Incommensurate
– Exotism around the smectic A state in associated liquid crystals - Hardouin **140A** (1986) 359
Incommensurate crystals
– Origins of quasicrystal ordering - Henley **140A** (1986) 306
Inequalities
– Rigorous studies of critical behavior - Aizenman **140A** (1986) 225
Interfacial tensions
– Hamiltonian and phenomenological models of microemulsions - Widom et al. **140A** (1986) 26
Invasion percolation
– Pattern growth and fluid displacements through porous media - Lenormand **140A** (1986) 114
Ioffe–Regel limit
– Fractons - Alexander **140A** (1986) 397
Ionization equilibrium
– The two-dimensional Coulomb gas: a fixed ion model and the dynamic characterization of the dielectric–plasma transition - Hansen **140A** (1986) 150
Ising model
– Rigorous studies of critical behavior - Aizenman **140A** (1986) 225
– On the—in a random magnetic field - Imbrie **140A** (1986) 291
– Spin glasses theory - Parisi **140A** (1986) 312
Itinerant electron model
– A model for crystallization: a variation on the Hubbard model - Lieb **140A** (1986) 240

Johnson–Mehl model (see *Domain growth*) **140A** (1987) 478

Kawasaki dynamics
– Microscopic origin of hydrodynamic equations: derivation and consequences - Lebowitz **140A** (1986) 232
Kikuchi approximation (see *Van Hemmen model*) **140A** (1987) 450
Kinetic coefficients (see *Localized spins*) **140A** (1987) 521
Kolmogorov cascade
– Towards a scaling theory of drag reduction - de Gennes **140A** (1986) 9
Kolmogorov complexity
– How to measure self-generated complexity - Grassberger **140A** (1986) 319
Kolmogorov–Sinai invariant
– From dynamical systems to statistical mechanics and back - Ruelle and Sinai **140A** (1986) 1
Kolmorov cut-off wave number
– Shear flow problems in critical binary mixtures - Onuki **140A** (1986) 204
Kosterlitz–Thouless phase transition
– Rigorous renormalization group at work - Gawędzki **140A** (1986) 78

Landauer formula
– Universal conductance fluctuations in disordered metals - Lee **140A** (1986) 169
Laplace equation
– Recent developments in the theory of pattern formation - Langer **140A** (1986) 44
Latent heat
– Recent developments in the theory of pattern formation - Langer **140A** (1986) 44
Lattice gas
– —automata for fluid mechanics - D'Humières and Lallemand **140A** (1986) 326
Lattice model
– Hamiltonian and phenomenological models of microemulsions - Widom et al. **140A** (1986) 26
Lattice modulations
– Spin slips and—in holmium: a magnetic X-ray scattering study - Bohr et al. **140A** (1986) 349
Lee–Yang edge singularities
– Some exact results for polymer models - Dhar **140A** (1986) 210
Levy stable distribution
– Levy walks with applications to turbulence and chaos - Shlesinger et al. **140A** (1986) 212
Light scattering
– Equilibrium structure and rigidity of alumina polymers - Schaefer et al. **140A** (1986) 105
– Experimental studies of the dynamics of fluid phase transitions in two dimensions - Knobler **140A** (1986) 198
Linear hydrodynamics
– Lattice gas automata for fluid mechanics - D'Humières and Lallemand **140A** (1986) 326
Liquid crystal
– Exotism around the smectic A state in associated—s - Hardouin **140A** (1986) 359
– Molecular tail lengths, dipole pairings, and multiple reentrance mechanisms of—s - Indekeu and Berker **140A** (1986) 368
– Synchrotron X-ray studies of liquid–vapor interfaces - Als-Nielsen **140A** (1986) 376
Liquid structure
– —and short-range forces between surfaces in liquids - Israelachvili and Christenson **140A** (1986) 278
Liquid–vapor interfaces
– Synchrotron X-ray studies of— - Als-Nielsen **140A** (1986) 376
Localization of light
– —: the quest for the white hole - Lagendijk et al. **140A** (1986) 183
Localized
– Fractons - Alexander **140A** (1986) 397

Localized spins
– Critical dynamics of a localized moment system coupled to conduction electrons - Becker **140A** (1987) 521
Logistic map
– Symbolic dynamics and systematics of periodic windows - Hao **140A** (1986) 85
– How to measure self-generated complexity - Grassberger **140A** (1986) 319
Long-range interactions
– Rigorous studies of critical behavior - Aizenman **140A** (1986) 225
Lorentz gas
– Systematic density expansion of transport properties of random lattices - Ernst **140A** (1986) 390
Lorentzian squared
– Phase transitions and metastable states in the presence of random fields - Cowley et al. **140A** (1986) 285
Lorenz model
– Symbolic dynamics and systematics of periodic windows - Hao **140A** (1986) 85
Lower critical dimension
– On the Ising model in a random magnetic field - Imbrie **140A** (1986) 291
– Spin glasses theory - Parisi **140A** (1986) 312

Macromolecules (see *Polymer chain*) **140A** (1987) 506
Magnetic spiral
– Spin slips and lattice modulations in holmium: a magnetic X-ray scattering study - Bohr et al. **140A** (1986) 349
Magnetic X-ray scattering
– Spin slips and lattice modulations in holmium: a—study - Bohr et al. **140A** (1986) 349
Magnetism
– A model for crystallization: a variation on the Hubbard model - Lieb **140A** (1986) 240
Magneto-elastic interactions
– Spin slips and lattice modulations in holmium: a magnetic X-ray scattering study - Bohr et al. **140A** (1986) 349
Magnetostriction
– Spin slips and lattice modulations in holmium: a magnetic X-ray scattering study - Bohr et al. **140A** (1986) 349
Many-body operators (see *Wick theorems*) **140A** (1987) 433
Marginal stability
– How do oscillating fronts form? - Collet and Eckmann **140A** (1986) 96
Mean-field bounds
– Rigorous studies of critical behavior - Aizenman **140A** (1986) 225
Mean-field theory (see *Spin glasses*) **140A** (1987) 450
Mean free path
– The Aharonov–Bohm effect in normal metals–non-ensemble averaged quantum transport - Webb et al. **140A** (1986) 175
Membranes
– Effective rigidity of— - Peliti **140A** (1986) 269
Memory model
– Hierarchical model of memory - Dotsenko **140A** (1986) 410
Metal–insulator mixtures
– Crystallization of amorphous— - Deutscher and Lareah **140A** (1986) 191
Metals, disordered
– Universal conductance fluctuations in disordered metals - Lee **140A** (1986) 169

Metastable states
– Phase transitions and—in the presence of random fields - Cowley et al. **140A** (1986) 285
Microemulsion(s)
– Hamiltonian and phenomenological models of microemulsions - Widom et al. **140A** (1986) 26
– Effective rigidity of membranes - Peliti **140A** (1986) 269
Micromodels
– Pattern growth and fluid displacements through porous media - Lenormand **140A** (1986) 114
Molecular dynamics
– The two-dimensional Coulomb gas: a fixed ion model and the dynamic characterization of the dielectric–plasma transition - Hansen **140A** (1986) 150
– Special purpose computers in statistical physics - Herrmann **140A** (1986) 421
Monolayers
– Experimental studies of the dynamics of fluid phase transitions in two dimensions - Knobler **140A** (1986) 198
Monte Carlo
– Special purpose computers in statistical physics - Herrmann **140A** (1986) 421
Monte Carlo renormalization
– Monte Carlo and coarse graining renormalization studies for the XY model with cubic anisotropy - Hu and Ying **140A** (1987) 585
Multifractals
– Multifractal structure of clusters and growing aggregates - Coniglio **140A** (1986) 51
Multilamellar phases
– Effective rigidity of membranes - Peliti **140A** (1986) 269
Multiplicative process
– Multifractal structure of clusters and growing aggregates - Coniglio **140A** (1986) 51

Nematic
– Molecular tail lengths, dipole pairings, and multiple reentrance mechanisms of liquid crystals - Indekeu and Berker **140A** (1986) 368
Nematic phase
– Synchrotron X-ray studies of liquid–vapor interfaces - Als-Nielsen **140A** (1986) 376
Non-Abelian gauge theory
– Rigorous renormalization group at work - Gawędzki **140A** (1986) 78
Non-collinear modulations
– Exotism around the smectic A state in associated liquid crystals - Hardouin **140A** (1986) 359
Non-Gaussian fixed point
– Rigorous renormalization group at work - Gawędzki **140A** (1986) 78
Non-perturbative analysis
– Rigorous studies of critical behavior - Aizenman **140A** (1986) 225
Nondefect network
– Some open questions in the elasticity of polymer networks - Bastide and Boue **140A** (1986) 251
Nonrelativistic point charges
– Quantum statistics of Coulomb systems: thermodynamic functions and phase transitions - Ebeling et al. **140A** (1986) 160
NP complete
– Spin glasses theory - Parisi **140A** (1986) 312
Nucleation
– Shear flow problems in critical binary mixtures - Onuki **140A** (1986) 204
– Formation of quasicrystals - Bendersky and Schaefer **140A** (1986) 298

Off-diagonal long-range order
– On the theory of dense exciton systems - Ivanov et al. **140A** (1987) 612
Orientational ordering
– Origins of quasicrystal ordering - Henley **140A** (1986) 306
Oscillating fronts
– How do—form? - Collet and Eckmann **140A** (1986) 96
Oscillation
– Transition of growth from dendrite to aggregate - Sawada **140A** (1986) 134

Pair correlation function
– Kinetics in chemically reactive liquids - Stillinger **140A** (1986) 142
Paramagnetic system
– Electrodynamics and thermodynamics of a—in a metallic resonator - Sadreev and Sukhinin **140A** (1987) 637
Pattern formation
– Recent developments in the theory of— - Langer **140A** (1986) 44
– Kinetics of phase transition in polymer gels - Tanaka **140A** (1986) 261
Peierls instability
– A model for crystallization: a variation on the Hubbard model - Lieb **140A** (1986) 240
Pendant chains
– Some open questions in the elasticity of polymer networks - Bastide and Boue **140A** (1986) 251
Pendulum map
– Some rigorous results for random and quasi-periodic potentials - Spencer **140A** (1986) 70
Penrose tiling
– Origins of quasicrystal ordering - Henley **140A** (1986) 306
Percolation
– Multifractal structure of clusters and growing aggregates - Coniglio **140A** (1986) 51
– Rigorous studies of critical behavior - Aizenman **140A** (1986) 225
Percolation clusters
– Special purpose computers in statistical physics - Herrmann **140A** (1986) 421
Periodic windows
– Symbolic dynamics and systematics of— - Hao **140A** (1986) 85
Persistence length
– Effective rigidity of membranes - Peliti **140A** (1986) 269
Phase diagram
– Molecular tail lengths, dipole pairings, and multiple reentrance mechanisms of liquid crystals - Indekeu and Berker **140A** (1986) 368
Phase diagram (see *XY model with cubic anisotropy*) **140A** (1987) 585
Phase equilibrium
– Hamiltonian and phenomenological models of microemulsions - Widom et al. **140A** (1986) 26
Phase separation
– Hamiltonian and phenomenological models of microemulsions - Widom et al. **140A** (1986) 26
Plasma, collisionless cold
– Solitons in collisionless cold plasma - Movsesyants **140A** (1987) 554
Plasma phase transitions
– Quantum statistics of Coulomb systems: thermodynamic functions and phase transitions - Ebeling et al. **140A** (1986) 160
Plasmon mode
– The two-dimensional Coulomb gas: a fixed ion model and the dynamic characterization of the dielectric–plasma transition - Hansen **140A** (1986) 150

Poisson's equation
– The two-dimensional Coulomb gas: a fixed ion model and the dynamic characterization of the dielectric–plasma transition - Hansen **140A** (1986) 150
Polar compounds
– Exotism around the smectic A state in associated liquid crystals - Hardouin **140A** (1986) 359
Polymer chain
– Dynamics of a—in an array of obstacles - Nechaev et al. **140A** (1987) 506
Polymer elasticity
– Towards a scaling theory of drag reduction - de Gennes **140A** (1986) 9
Polymer gels
– Kinetics of phase transition in— - Tanaka **140A** (1986) 261
Polymer models
– Some exact results for— - Dhar **140A** (1986) 210
Polymer networks

Polymerization
– Kinetics in chemically reactive liquids - Stillinger **140A** (1986) 142
Porous media
– Pattern growth and fluid displacements through— - Lenormand **140A** (1986) 114
Potts model, q-state
– Critical dynamics of the Potts model in several dimensionalities - Lage **140A** (1987) 629
Pressure-area isotherms
– Experimental studies of the dynamics of fluid phase transitions in two dimensions - Knobler **140A** (1986) 198
Projection operator formulation
– —for second order response - Sauermann et al. **140A** (1987) 597

Quantum transport
– The Aharonov–Bohm effect in normal metals–non-ensemble averaged— - Webb et al. **140A** (1986) 175
Quasi-crystals
– Formation of quasicrystals - Bendersky and Schaefer **140A** (1986) 298
– Origins of quasicrystal ordering - Henley **140A** (1986) 306
Quasi-periodic potentials
– Some rigorous results for random and— - Spencer **140A** (1986) 70
Quasiperiodicity
– Symbolic dynamics and systematics of periodic windows - Hao **140A** (1986) 85

Random field Ising model
– Phase transitions and metastable states in the presence of random fields - Cowley et al. **140A** (1986) 285
– Special purpose computers in statistical physics - Herrmann **140A** (1986) 421
Random fields
– Phase transitions and metastable states in the presence of— - Cowley et al. **140A** (1986) 285
Random magnetic field
– On the Ising model in a— - Imbrie **140A** (1986) 291
Random resistor network
– Systematic density expansion of transport properties of random lattices - Ernst **140A** (1986) 390
Random tiling
– Origins of quasicrystal ordering - Henley **140A** (1986) 306

Random walk
– Universal conductance fluctuations in disordered metals - Lee **140A** (1986) 169
– Levy walks with applications to turbulence and chaos - Shlesinger et al. **140A** (1986) 212
– Systematic density expansion of transport properties of random lattices - Ernst **140A** (1986) 390
Re-entrance frustration
– Molecular tail lengths, dipole pairings, and multiple reentrance mechanisms of liquid crystals - Indekeu and Berker **140A** (1986) 368
Re-entrant nematic phase
– Exotism around the smectic A state in associated liquid crystals - Hardouin **140A** (1986) 359
Real space renormalization
– Multifractal structure of clusters and growing aggregates - Coniglio **140A** (1986) 51
Renormalization group
– A critical phenomenon approach of biogenesis - Tsallis and Ferreira **140A** (1986) 336
Resonator, metallic
– Electrodynamics and thermodynamics of a paramagnetic system in a metallic resonator - Sadreev and Sukhinin **140A** (1987) 637
Reynolds number
– Lattice gas automata for fluid mechanics - D'Humières and Lallemand **140A** (1986) 326
RFIM (random field Ising model)
– Phase transitions and metastable states in the presence of random fields - Cowley et al. **140A** (1986) 285
– Special purpose computers in statistical physics - Herrmann **140A** (1986) 421
Rigidity, effective
– Effective rigidity of membranes - Peliti **140A** (1986) 269
Rubber, physics of
– Some open questions in the elasticity of polymer networks - Bastide and Boue **140A** (1986) 251

Saffman–Taylor problem
– Recent developments in the theory of pattern formation - Langer **140A** (1986) 44
SANS (small-angle neutron scattering)
– Some open questions in the elasticity of polymer networks - Bastide and Boue **140A** (1986) 251
Scaling
– Multifractal structure of clusters and growing aggregates - Coniglio **140A** (1986) 51
Scaling dimension
– Conformal invariance and critical behavior - Cardy **140A** (1986) 219
Scaling operators
– Conformal invariance and critical behavior - Cardy **140A** (1986) 219
Scher–Zallen rule
– Crystallization of amorphous metal–insulator mixtures - Deutscher and Lareah **140A** (1986) 191
Schrödinger equation
– A model for crystallization: a variation on the Hubbard model - Lieb **140A** (1986) 240
Schrödinger operator
– Some rigorous results for random and quasi-periodic potentials - Spencer **140A** (1986) 70
Second order response
– Projection operator formulation for— - Sauermann et al. **140A** (1987) 597
Selection mechanism
– How do oscillating fronts form? - Collet and Eckmann **140A** (1986) 96
Self-generated complexity
– How to measure— - Grassberger **140A** (1986) 319
Semilinear parabolic equation
– How do oscillating fronts form? - Collet and Eckmann **140A** (1986) 96

sh-Gordon equation (see *Plasma, collisionless cold*) **140A** (1987) 554
Shear flow
– —problems in critical binary mixtures - Onuki **140A** (1986) 204
Sigma model

Surfaces in liquids
– Liquid structure and short-range forces between— - Israelachvili and Christenson **140A** (1986) 278
Surfactant
– Hamiltonian and phenomenological models of microemulsions - Widom et al. **140A** (1986) 26
Swelling phase transition
– Kinetics of phase transition in polymer gels - Tanaka **140A** (1986) 261
Symbolic dynamics
– —and systematics of periodic windows - Hao **140A** (1986) 85
Synchrotron X-ray studies
– —of liquid–vapor interfaces - Als-Nielsen **140A** (1986) 376

Thermal fluctuations
– Kinetics of phase transition in polymer gels - Tanaka **140A** (1986) 261
Thermodynamic instabilities
– Quantum statistics of Coulomb systems: thermodynamic functions and phase transitions - Ebeling et al. **140A** (1986) 160
Thermodynamic limit
– The Aharonov–Bohm effect in normal metals–non-ensemble averaged quantum transport - Webb et al. **140A** (1986) 175
Thulium
– Spin slips and lattice modulations in holmium: a magnetic X-ray scattering study - Bohr et al. **140A** (1986) 349
Tip splitting
– Fractal viscous fingering: experiments and models - Nittmann **140A** (1986) 124
Topological interactions (see *Polymer chain*) **140A** (1987) 506
Transfer matrix
– Special purpose computers in statistical physics - Herrmann **140A** (1986) 421
Traveling salesman problem
– What statistical mechanics has to say to computer scientists - Anderson **140A** (1986) 405
Turbulence
– Towards a scaling theory of drag reduction - de Gennes **140A** (1986) 9
– Levy walks with applications to—and chaos - Shlesinger et al. **140A** (1986) 212

2d fluid mesophases
– Exotism around the smectic A state in associated liquid crystals - Hardouin **140A** (1986) 359

Undercooling
– Transition of growth from dendrite to aggregate - Sawada **140A** (1986) 134
Undulations
– Effective rigidity of membranes - Peliti **140A** (1986) 269
Universal
– Fractons - Alexander **140A** (1986) 397
Universality
– Decay of metastable and unstable states: mechanisms, concepts and open problems - Binder **140A** (1986) 35

Van der Waals forces
– Liquid structure and short-range forces between surfaces in liquids - Israelachvili and Christenson **140A** (1986) 278
Van Hemmen model
– The short-range—in a simple Kikuchi approximation: comparison with the mean-field model and with spin-glasses - de Smedt et al. **140A** (1987) 450
Velocity auto-correlation function
– Systematic density expansion of transport properties of random lattices - Ernst **140A** (1986) 390
Velocity field, nonuniform
– The relativistic Fermi gas in a nonuniform velocity field - Heinz et al. **140A** (1987) 567
Vesicle size distribution
– Effective rigidity of membranes - Peliti **140A** (1986) 269
Vibrations
– Fractons - Alexander **140A** (1986) 397
Viscoelasticity
– Towards a scaling theory of drag reduction - de Gennes **140A** (1986) 9
Viscous fingering
– Fractal—: experiments and models - Nittmann **140A** (1986) 124
Viscous instabilities
– Pattern growth and fluid displacements through porous media - Lenormand **140A** (1986) 114

Weak localization
– Localization of light: the quest for the white hole - Lagendijk et al. **140A** (1986) 183
White hole
– Localization of light: the quest for the— - Lagendijk et al. **140A** (1986) 183
Wick theorems
– Thermodynamical and Green function many-body— - Westwanski **140A** (1987) 433
W(001) surface (see *XY model with cubic anisotropy*) **140A** (1987) 585

X-ray scattering
– Equilibrium structure and rigidity of alumina polymers - Schaefer et al. **140A** (1986) 105
XY model with cubic anisotropy
– Monte Carlo and coarse graining renormalization studies for the— - Hu and Ying **140A** (1987) 585

Yoffe–Regel criterion
– Localization of light: the quest for the white hole - Lagendijk et al. **140A** (1986) 183
